2018 Consumer Confidence Report

Water System Name: Upper Lake County Water District	Report Date: May 10, 2019					
We test the drinking water quality for many constituents as requour monitoring for the period of January 1 - December 31, 2018	uired by state and federal regulations. This report shows the results of 8 and may include earlier monitoring data.					
Este informe contiene información muy importante sobre su	agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.					
Type of water source(s) in use: Groundwater						
Name & general location of source(s): Wells 1 & 2 both	located on Mendenhall Ave., Upper Lake, CA 95485					
	leted December 2002. The sources are both considered to be the most able to agricultural activities in the area.					
Time and place of regularly scheduled board meetings for public in the District Office located at 9471 Main St., Upper Lake, CA	· · ·					
For more information, contact: Rachelle Henry	Phone: (707) 275-3232					
TERMS USEI) IN THIS REPORT					
 Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water. Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (U.S. EPA). Public Health Goal (PHG): The level of a contaminant in drinking water below or expected risk to health. 	 Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels. Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water. Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow. Variances and Exemptions: State Board permission to exceed an MCL or not comply with a treatment technique under certain conditions. 					
 PHGs are set by the California Environmental Protection Agency. Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants. Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants. Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements. 	 Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system. Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an <i>E. coli</i> MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions. ND: not detectable at testing limit ppm: parts per million or milligrams per liter (mg/L) ppt: parts per trillion or nanograms per liter (ng/L) ppq: parts per quadrillion or picogram per liter (pg/L) pCi/L: picocuries per liter (a measure of radiation) 					

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides that may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, agricultural application, and septic systems.
- Radioactive contaminants that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. EPA and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, and 6 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old. Any violation of an AL, MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

Microbiological Contaminants (complete if bacteria detected)	Highest No. of Detections	No. of Months in Violation	MCL	MCLG	Typical Source of Bacteria	
Total Coliform Bacteria (state Total Coliform Rule)	1	0	1 positive monthly sample	0	Naturally present in the environment	
Fecal Coliform or <i>E. coli</i> (state Total Coliform Rule)	(In the year) 0	0	A routine sample and a repeat sample are total coliform positive, and one of these is also fecal coliform or <i>E.</i> <i>coli</i> positive		Human and animal fec waste	
<i>E. coli</i> (federal Revised Total Coliform Rule)	(In the year) 0	0	(a)	0	Human and animal fec waste	

TABLE 2 – SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER								
Lead and Copper (complete if lead or copper detected in the last sample set)	Sample Date	No. of Samples Collected	90 th Percentile Level Detected	No. Sites Exceeding AL	AL	PHG	No. of Schools Requesting Lead Sampling	Typical Source of Contaminant
Lead (ppb)	10/14/16	10	.004	0	15	0.2	1	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits
Copper (ppm)	10/14/16	10	0.36	0	1.3	0.3	N/A	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

TABLE 3 – SAMPLING RESULTS FOR SODIUM AND HARDNESS						
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sodium (ppm)	12/13/2017	7.3 – 7.8 MG/L	N/A	none	none	Salt present in the water and is generally naturally occurring
Hardness (ppm)	12/13/2017	99	N/A	none	none	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring

TABLE 4 – DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD							
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant	
Nitrate (as N)	12/19/2018	0.40 mg/L	N/A	10 mg/L	10 mg/L	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits.	
Thiobencarb	10/10/2018	0	N/A	70 UG/L	70 UG/L	Herbicide run-off	
Diquat	10/10/2018	0	N/A	0.02 mg/L	20 ppb	Herbicide run-off	
Molinate	10/10/2018	0	N/A	20 UG/L	20 UG/L	Herbicide run-off	
1,2,3-Trichloropropane	09/28/2018	< 0.005	N/A	0.005UG/L	0.005		
Gross Alpha (pCi/L)	08/30/2017	0.500	NA	15	15	Decay of natural and man-made deposits	
Barium (UG/L)	12/13/2017	120	NA	1000	1000	Naturally occurring in the environment	
DI (2=Ethylhexyl) Adipate	12/13/2017	5.0	NA	400		Discharges from industrial manufacturing	
DI (2=Ethylhexyl) Phthalate	12/13/2017	3.0	NA	4		Discharges from industrial manufacturing	

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Bicarbonate Alkalinity	12/13/2017	140	130-140	NA	NA	Dissolved minerals
Calcium	12/13/2017	21	NA	NA	NA	Naturally occurring in the environmer
Chloride	12/13/2017	3.5	3.2-3.5	500	NA	Erosion of natural deposits
Magnesium	12/13/2017	11	NA	50	NA	Naturally occurring in the environme
Specific Conductance	12/13/2017	240	NA	1600	NA	Substances that form ions when in water
Sulfate	12/13/2017	7.8	NA	500	NA	Run off /leaching from natural depos industrial wastes
Total Dissolved Solids	12/13/2017	120	110-120	1000	NA	Erosion of natural deposits

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791)
